

Status/Progress Report

Project:

A platform of errand delivery Service in the same city based on crowdsourcing model

Status/Progress Report

Project Name: A platform of errand delivery Service in the same city based on crowdsourcing model

Team Member Name: Bin Ren

Date: 1. 4

Reporting Period: Finish design

Work completed this reporting period:

During this period, our team mainly works with some important design, such as prototype design and database design, draw the E-R diagram and business process diagram and so forth.

I am mainly in charge of the business process diagram and a prototype of order provider app.

Work to complete next reporting period:

In the next period, the work is mainly laid on programming. Our team needs to finish the programming design in proposal. As for me, I should finish the front-end of order provider app and also connect it to the back-end.

What's going well and why:

Generally speaking, I reckon the prototype design goes well. Since when I design the prototype for the order provider app, I modify it for about three times after communicating with clients.

What's not going well and why:

I reckon that the business process diagram goes not so well. At first, our team spends quite a long time to figure out the whole process of this project. However this diagram design still not clear and it have been changed by several times.

Suggestions/Issues:

At first, when I design the business process diagram, I do not review the related requirement of drawing diagrams and make a lot of mistakes.

After communicating with my supervisors, I am able to figure out the whole process and finish the diagram correctly.

Project changes

The prototype that I design will have a great influence on the real apps developed.
