

Status/Progress Report

Project:

A platform of errand delivery Service in the same city based on crowdsourcing model

Status/Progress Report

Project Name: A platform of errand delivery Service in the same city based on crowdsourcing model

Team Member Name: Ying He

Date: Dec. 20, 2018

Reporting Period: in the stage of project beginning

Work completed this reporting period:

After we determined the project, we had several conversations with the clients. In these few conversations we identified the basic requirements. During group meetings, we finalized the requirements and summarized into a document.

Then, we discussed about the product business logic and determined business process diagram during group meetings.

After that, we started to design database, we draw the E-R diagram and designed data dictionary.

Work to complete next reporting period:

A web-based management system prototype.

Back-end programming.

What's going well and why:

We finalized entities and relations of database quickly because we had smooth communication with team members.

What's not going well and why:

We have modified several times of function design. Because clients always changed their requirements of the product, we needed to modify the functions as required.

Suggestions/Issues:

It was hard to make clients satisfied with our original design of the product.

Project changes

We add blacklist to forbidden complained users to publish orders or take orders.
