

Status/Progress Report

Project:

A platform of errand delivery Service in the same city based on crowdsourcing model

Status/Progress Report

Project Name: A platform of errand delivery Service in the same city based on crowdsourcing model

Team Member Name: Bin Ren

Date: 4.23

Reporting Period: Finish program

Work completed this reporting period:

During this period, our team mainly work with programming and we finish the basic functions that we mentioned in the proposal.

I am mainly in charge of development of order providers app.

Work to complete next reporting period:

In the next period, the work is mainly laid on documentation and test. Our team need to sort all the documentations and prepare for the final presentation.

What's going well and why:

Generally speaking, I reckon the models after register model goes well. Since I have experience of develop and it is more easy to develop as the same steps.

What's not going well and why:

The process of connecting to the remote database goes not so well since I failed to connect native android app to remote database. I try several times to connect it and maybe I am not familiar with it.

Suggestions/Issues:

Compared with the first gantt chart that we design in our proposal, our process is a bit delayed. The most issue is that our team is not so familiar with android development.

In may opinion, our team should finish the important functions at first and maybe change some realization ways.

Project changes

During the development process, I find that when I develop native android app, I can not connect to the remote database. Therefore our team decide to change to develop the webapp.
