Status/Progress Report

Project:

A platform of errand delivery Service in the same city based on crowdsourcing model

Status/Progress Report

Project Name: A platform of errand delivery Service in the same city based on crowdsourcing model

Team Member Name: Zhangyi Shen

Date: Dec.19,2018

Reporting Period: in the stage of project beginning

Work completed this reporting period:

After we selected the theme of the project, we had several conversations with the client. After understanding the customer's needs, we basically determined the basic functions and requirements of the product and compiled it into a document. After drawing the management system prototype., we held a demand review meeting with the customer, and finally determined the requirements and summarized them into a document. Then, we discussed the product business logic, planned the design, development, testing time, and draw the Gantt chart.

Work to complete next reporting period:

Design the interface of the background management platform
Design the Database

What's going well and why:

Through brainstorming, our team has improved and expanded customer needs, and effective communication has greatly improved our work efficiency.

What's not going well and why:

Because customers always change their requirements for products and take into account the limitations of our technical skills, we need to modify the functionality as needed, and we have revised the requirements of the product several times.

Suggestions/Issues:

The original product features are too simple.

Project changes

We add blacklist to forbidden complained users to publish orders or take orders
