Status/Progress Report

Project:

A platform of errand delivery Service in the same city based on crowdsourcing model

Status/Progress Report

Project Name: A platform of errand delivery Service in the same city based on crowdsourcing model

Team Member Name: Ying He

Date: Mar. 18, 2019

Reporting Period: in the stage of project development

Work completed this reporting period:

I have completed the prototype of the web-based management system.

I am working on back-end programming.

We have implemented the function of registration, login, order create, order display.

Work to complete next reporting period:

Back-end programming.

Sorting documents.

Test.

What's going well and why:

As for prototype, through several client meetings, I changed three version of the prototype to make clients satisfied. On original version, we only had functions of order information inquiry, order information modification and user information inquiry. After considering the clients' suggestion, I added blacklist for forbidding complained users and deliverymen publishing orders and taking orders.

What's not going well and why:

When we doing android programming, we found that we could not connect android end with remote database successfully. That is because the version of jar package is not match with the version of MySQL.

Suggestions/Issues:

Database connection is not work well.

Project changes

We reduced three back-ends to only one back-end for supporting two android apps and a web-based management system.
